

STARDUST

Available In Cases And Pails

■ EASY TO USE

Water activated, and as with all Star System products, requires only standard floor equipment.

■ COST EFFECTIVE

Reduces direct maintenance labor while providing consistent appearance curve

■ SAFE

Engineered to be compatible with all natural stone installations

■ NATURAL CARE SYSTEM

Specially formulated for preservation, maintenance and restoration of natural stone, without use of harsh acids or topical treatments

QUANTITIES AVAILABLE

Case (12) 1 lb. Containers
Case (4) 8 lb. Containers
40 lb. Pail

DESCRIPTION

A powder formulated to restore the factory polish and natural color to marble and stone that has dulled.

USES

Can be used on marble, limestone, terrazzo, travertine and onyx. Removes superficial scratches, etch marks and rings caused by certain acids in fruit juices, spirits, vinegar, etc. Not for use on green marble or granite.

COVERAGE

Approximately 150 to 300 square feet per pound for restoration work and 250 to 500 square feet per pound for maintenance polishing.

DIRECTIONS

The use of 175 rpm floor machine (minimum weight 100 pounds) with solution tank shower-feed pad driver and a white floor maintenance pad is recommended.

■ Sprinkle Stardust on floor with applicator-dispenser in a circle approximately the size of the machine being used. Set machine on Stardust that has been applied to the floor. With solution tank water control, apply water to the floor BEFORE turning on floor machine. Add Stardust or water as necessary to maintain a watery slurry, rotating of machine may splatter the slurry; so take care to protect adjoining areas of carpet, wood and walls.

■ If water solution is not used, wet a small area with clean water and sprinkle in Stardust with applicator-dispenser. Turn on floor machine and work water and Stardust into slurry.

■ Work areas of no more than 15 to 20 square feet at a time. DO NOT ALLOW SLURRY TO DRY ON FLOOR AT ANY TIME.

■ After running floor machine over the 15 to 20 square foot area three or four times, use a 16 inch or 18 inch window squeegee and pull across surface to check results. When a high polish in this area has been achieved, pull slurry, with window squeegee, to next area to be done.

■ Mop the completed area immediately with Starclean solution at recommended dilution ratio making sure all Stardust slurry is removed from the surface and grout lines. IMPORTANT: Certain types of grout may turn white if Stardust is left in grout lines. To remove you MUST use a wet vac to get slurry and cleaner solution from the grout line; if a wet vac is not being used, completely agitate slurry from grout lines.

■ Repeat the polishing process using same slurry adding water or Stardust as needed until entire area being polished is completed.

■ A final mop rinse with fresh Starclean solution is recommended for entire completed area. When floor is dry, buff with clean, dry white floor maintenance pad.

CAUTION: USE THIS PRODUCT IN WELL, VENTILATED AREAS. *This product contains mild corrosives and must be used as directed. Keep out of children's reach. Avoid contact with food or beverages and risk of accidental ingestion. Do not refill into beverage bottles or food containers.*
